## SAFETY, GENERAL INFORMATION AND STANDARD TORQUE DATA

## TABLE OF CONTENTS

GENERAL INFORMATION .....	3
SAFETY .....	4
STANDARD TORQUE DATA FOR CAP SCREWS AND NUTS.....	6

## GENERAL INFORMATION

### Cleaning

Clean all metal parts except bearings, in a suitable cleaning solvent or by steam cleaning. Do not use caustic soda for steam cleaning. After cleaning, dry and put oil on all parts. Clean oil passages with compressed air. Clean bearings in a suitable cleaning solvent. Dry the bearings completely and put oil on the bearings.

### Inspection

Check all parts when the parts are disassembled. Replace all parts that have wear or damage. Small scoring or grooves can be removed with a hone or crocus cloth. Complete a visual inspection for indications of wear, pitting and the replacement of parts necessary to prevent early failures.

### Bearings

Check bearings for easy action. If bearings have a loose fit or rough action, replace the bearing. Wash bearings with a suitable cleaning solvent and permit to air dry. DO NOT DRY BEARINGS WITH COMPRESSED AIR.

### Needle Bearings

Before you press needle bearings in a bore always remove any metal protrusions in the bore or edge of the bore. Before you press bearings into position, put petroleum jelly on the inside and outside diameter of the bearings.

### Gears

Check all gears for wear and damage. Replace gears that have wear or damage.

### Oil Seals, O-rings and Gaskets

Always install new oil seals, O-rings and gaskets. Put petroleum jelly on seals and O-rings.

### Shafts

Check all shafts that have wear or damage. Check the bearing and oil seal surfaces of the shafts for damage.

### Service Parts

Always install genuine Case service parts. When ordering refer to the Parts Catalog for the correct part number of the genuine Case replacement items. Failures due to the use of other than genuine Case replacement parts are not covered by warranty.

### Lubrication

Only use the oils and lubricants specified in the Operator's or Service Manuals. Failures due to the use of non-specified oils and lubricants are not covered by warranty.

## SAFETY

*This symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED. The message that follows the symbol contains important information about safety. Carefully read the message. Make sure you fully understand the causes of possible injury or death.*

To prevent injury always follow the Warning, Caution and Danger notes in this section and throughout the manual.

Place a "Do not operate" tag on the starter switch key before carrying out any service or repair work on the machine.

**WARNING:** *Read the operator's manual to familiarize yourself with the correct control functions.*

**WARNING:** *Operate the machine and equipment controls from the seat position only. Any other method could result in serious injury.*

**WARNING:** *This is a one man machine, no riders allowed.*

**WARNING:** *Before starting engine, study Operator's Manual safety messages. Read all safety signs on machine. Clear the area of other persons. Learn and practice safe use of controls before operating.*

*It is your responsibility to understand and follow manufacturers instructions on machine operation, service and to observe pertinent laws and regulations. Operator's and Service Manuals may be obtained from your Case dealer.*

**WARNING:** *If you wear clothing that is too loose or do not use the correct safety equipment for your job, you can be injured. Always wear clothing that will not catch on objects. Extra safety equipment that can be required includes hard hat, safety shoes, ear protection, eye or face protection, heavy gloves and reflector clothing.*

**WARNING:** *When working in the area of the fan belt with the engine running, avoid loose clothing if possible, and use extreme caution.*

**WARNING:** *When doing checks and tests on the equipment hydraulics, follow the procedures as they are written. DO NOT change the procedure.*

**WARNING:** *When putting the hydraulic cylinders on this machine through the necessary cycles to check operation or to remove air from a circuit, make sure all people are out of the way.*

**WARNING:** Use insulated gloves or mittens when working with hot parts.

**WARNING:** Lower all attachments to the ground or use stands to safely support the attachments before you do any maintenance or service.

**WARNING:** Pin sized and smaller streams of hydraulic oil under pressure can penetrate the skin and result in serious infection. If hydraulic oil under pressure does penetrate the skin, seek medical treatment immediately. Maintain all hoses and tubes in good condition. Make sure all connections are tight. Make a replacement of any tube or hose that is damaged or thought to be damaged. DO NOT use your hand to check for leaks, use a piece of cardboard or wood.

**WARNING:** When removing hardened pins such as a pivot pin, or a hardened shaft, use a soft head (brass or bronze) hammer or use a driver made from brass or bronze and a steel head hammer.

**WARNING:** When using a hammer to remove and install pivot pins or separate parts using compressed air or using a grinder, wear eye protection that completely encloses the eyes (approved goggles or other approved eye protectors).

**WARNING:** Use suitable floor (service) jacks or chain hoist to raise wheels or tracks off the floor. Always block machine in place with suitable safety stands.

**WARNING:** When servicing or repairing the machine, keep the shop floor and operator's compartment and steps free of oil, water, grease, tools, etc. Use an oil absorbing material and/or shop cloths as required. Use safe practices at all times.

**WARNING:** Some components of this machine are very heavy. Use suitable lifting equipment or additional help as instructed in this Service Manual.

**WARNING:** Engine exhaust fumes can cause death. If it is necessary to start the engine in a closed place, remove the exhaust fumes from the area with an exhaust pipe extension. Open the doors and get outside air into the area.

**WARNING:** When the battery electrolyte is frozen, the battery can explode if (1), you try to charge the battery, or (2), you try to jump start and run the engine. To prevent the battery electrolyte from freezing, try to keep the battery at full charge. If you do not follow these instructions, you or others in the area can be injured.

## STANDARD TORQUE DATA FOR CAP SCREWS AND NUTS

### Tightening of Cap Screws and Nuts

Tighten alternately so that tightening torque can be applied evenly. The numbers in the figure below indicate the order of tightening.

JS00481A

Cap screws which have had Loctite used (white residue remains after removal) should be cleaned with light oil or suitable cleaning solvent and dried. Apply 2-3 drops of Loctite to the thread portion of the cap screw and then tighten.

## Torque Table

Tighten cap screws and nuts according to the table below if there are no other special instructions.

Cap Screw Name Size (Size)			M6	M8	M10	M12	M14	M16	M18	M20
<b>Cap Screw</b>	Spanner	[mm]	10	13	17	19	22	24	27	30
		[in.]	0.39	0.51	0.67	0.75	0.87	0.95	1.06	1.18
	Tightening torque	[Nm]	6.9	19.6	39.2	58.8	98.1	157.2	196.0	274.0
		[lb-ft]	5.1	14.5	29.0	43.4	72.5	116.0	144.6	202.4
<b>Socket Head Cap Screw</b>	Spanner	[mm]	5	6	8	10	12	14	14	17
		[in.]	0.20	0.24	0.32	0.39	0.47	0.55	0.55	0.67
	Tightening torque	[Nm]	8.8	21.6	42.1	78.4	117.6	176.4	245.0	343.0
		[lb-ft]	6.5	15.9	31.1	57.8	86.8	130.1	180.8	253.1

**WARNING:** *This symbol is used in this manual to indicate important safety messages. Whenever you see this symbol, carefully read the message which follows. Your safety depends on it.*

# TYPE, SERIAL NUMBER AND YEAR OF MANUFACTURE OF THE MACHINE

For all part orders, request for information or assistance, always specify the type and the serial number of the machine to your CASE dealer.

Fill in the following lines with the required information: Type, serial number, year of manufacture of the machine and the serial numbers of the hydraulic and mechanical components.

## Machine

CP98N006

168205A1

CS01J532

- (1) Type .....
- (2) Serial number .....
- (3) Year of manufacture .....

## Engine

Make and type .....

Serial number .....

## Serial numbers of the components

Hydraulic pump.....

Swing reduction gear.....

Travel reduction gears .....

Travel control valve .....

Attachment control valve .....

Swing control valve.....

## INGREDIENTS

The ingredients must correspond to specific characteristics for every usage.

**WARNING:** *You must respect the operating conditions for the different ingredients.*

### Hydraulic fluid

The CASE hydraulic fluid is specially adapted for high pressure and CASE's hydraulic circuit. The type of fluid to be used depends on the ambient temperature.

#### Temperate climates

-20°C to +40°C

Fluid type: ISO VG 46

CASE reference: POHYDR

#### Hot climates

0°C to +60°C

Fluid type: ISO VG 100

CASE reference: POHYPC

#### Cold climates

-40°C to +20°C

Fluid type: ISO VG 22

CASE reference: POHYPF

#### Temperate climate biodegradable fluid:

This yellow-coloured fluid is miscible with standard fluid. When introducing this fluid, it is recommended to drain the hydraulic system completely.

Fluid type: ISO VG 46

CASE reference: CASYNTH 46

These different grades of fluids must comply with the CASE specification.

### Transmission assembly oil

Extreme pressure oil used for transmission assemblies in housing.

Extreme pressure oil TYPE API GL5 GRADE 80W90 and ISO VG 150

### Greases

The type of grease to be used depends on the ambient temperature.

#### Hot and temperate climates

-20°C to +60°C

Extreme pressure EP NLGI grade 2 grease with molybdenum disulfide.

#### Cold climates

-40°C to +20°C

Extreme pressure EP NLGI grade 0 grease.

## Engine oil

The CASE No. 1 engine oil is recommended for your engine. This oil ensures proper lubrication of your engine for all operating conditions.

If you are unable to procure the CASE No. 1 Multiperformance or Performance engine oil, use the corresponding oil from the API/CG/CF category.

**NOTE:** Do not put any performance additives or any other additives in the engine housing. The oil changing intervals are indicated in this manual based on tests carried out on CASE lubricants.

RD97F136

RD97F100

## Viscosity of oils/Operating range of oils

(A) FAHRENHEIT TEMPERATURE

(B) CELSIUS TEMPERATURE

(1) ALL SEASONS

(\*) SHOWS THAT IT IS NECESSARY TO USE AN ENGINE OIL HEATER OR THERMAL COOLER.

(2) WINTER

(3) TROPICAL

(4) ARCTIC

CS98M561

## Fuel

The fuel to be used must comply with the D975 norm of the American Society for Testing and Materials (ASTM).

Use type No. 2 fuel, use of other fuels can cause a loss of engine power and excessive fuel consumption.

In cold weather, it is provisionally accepted that a mixture of No. 1 and No. 2 fuels be used. Contact your fuel supplier.

If the temperature drops below the freezing point of the fuel (point where paraffin appears), paraffin crystals in the fuel will cause loss of engine power or starting trouble.

**IMPORTANT:** *In cold weather, fill up the reservoir with fuel after each workday, in order to avoid the formation of condensation.*

## Storing fuel

Prolonged storage of fuel promotes the accumulation of foreign bodies or condensed moisture in the storage tank. Many engine failures are caused by the presence of water in fuel.

The storage tank must be placed outside and the fuel should be maintained at as low a temperature as possible. Drain the condensed moisture at regular intervals.

## Antifreeze/anticorrosive

Use the antifreeze in all seasons to protect the coolant system from corrosion and to avoid any risk of freezing.

In environments with a temperature greater than  $-36^{\circ}\text{C}$ , use a 50% mixture of antifreeze in an ethylene glycol base.

In environments with a temperature less than  $-36^{\circ}\text{C}$ , it is recommended that you use a 40% water and 60% antifreeze mixture.

## Environment

Before carrying out any maintenance operation on this machine and before throwing away the liquids or lubricants used, always think of the environment. Never throw oil or liquids on the ground and never put them in leaking containers.

Consult your local centre for ecological recycling for information on the appropriate method for disposing off these substances.

## Plastic and resin parts

When cleaning plastic parts, on the console, the instrument panel, the indicator and gauges etc., do not use petrol, paraffin, paint solvents, etc. Use only water, soap and a soft cloth.

The use of petrol, paraffin, paint solvents etc... causes discoloration, cracks or deformation of these parts.

# SPECIFICATIONS

**CX290**

## Engine

Make..... Isuzu  
 Model..... CC-6BG1T

Type: Four stroke, water cooled with overhead valves, direct injection in-line cylinder (electronic control) with turbocharger.

Number of cylinders..... 6  
 Bore and stroke ..... 105 x 125 mm  
 Displacement..... 6494 cc

### Operating conditions

Idle..... 1000 rpm  
 Max speed ..... 2200 rpm  
 Power ECC 1289 ..... 140.5 kW (191 HP)  
 Max torque..... 676.2 Nm at 1800 rpm

## Capacities

Engine oil capacity..... 24 litres  
 Engine cooling circuit..... 29 litres  
 Capacity of only the radiator ..... 20 litres  
 Fuel reservoir..... 340 litres  
 Hydraulic fluid reservoir capacity ..... 120 litres  
 Total hydraulic circuit capacity ..... 240 litres  
 Capacity of only the oil-cooler ..... 15.7 litres  
 Travel reduction gear housing capacity ..... 4.7 litres  
 Swing drive housing capacity ..... 6 litres  
 Idler pulley capacity ..... 250 cc  
 Upper roller capacity..... 245 to 250 cc  
 Lower roller capacity..... 280 cc

**NOTE:** *These capacities are given only for information purposes. To check the fluid levels, always use the oil gauge, visual gauges or the filler cap.*

## Electrical system

Type of system..... 24 volts earth negative  
 Alternator amperage..... 50 amperes

### Battery

Number of batteries required ..... 2  
 Voltage of each battery ..... 12 volts  
 Capacity ..... 112 Ah  
 Reserve..... 160 min  
 Cold startability at -17° ..... 800 A  
 Load for load control..... 400 A

### Starter

Voltage ..... 24 volts  
 Power ..... 4.5 kW  
 Voltage regulator ..... built-in, without adjustment

## Hydraulic system

### Main hydraulic pump

Variable flow double pump, with axial pistons.

Maximum flow.....	2 x 221 l/min
Displacement.....	2 x 97.2 cc

### Hydraulic pilot pump

Fixed flow pump

Max flow .....	22.3 l/min
Displacement.....	10 cc

### Pressure setting

Pilot circuit relief .....	39 ± 1 bar
Main circuit relief (standard) .....	343 ± 3 bar
Main circuit relief (power-up) .....	373 ± 5 bar
Secondary relief (boom, dipper and bucket).....	392 ± 5 bar
Secondary relief (swing) .....	294 ± 4 bar
Secondary relief (travel) .....	380 ± 5 bar
Safety valve (boom and dipper).....	392 ± 5 bar

## Cylinder

### Boom cylinder

Cylinder bore .....	135 mm
Rod diameter.....	95 mm
Stroke .....	1369 mm

### Dipper cylinder

Cylinder bore .....	150 mm
Rod diameter.....	105 mm
Stroke .....	1438 mm

### Bucket cylinder

Cylinder bore .....	130 mm
Rod diameter.....	90 mm
Stroke .....	1073 mm

### Cylinder leakage - attachment lowering (without load)

Boom cylinders (rods retracted) .....	3 mm/5 min
Dipper cylinder (rod extended) .....	5 mm/5 min
Dipper cylinder (rod extended) .....	7 mm/5 min
Total (at the end of the attachment).....	200 mm/5 min

### Cylinder speed (in S mode)

Boom raised (bucket open and on the ground) .....	4.6 ± 0,6 sec.
Boom lowered (bucket open).....	3.7 ± 0.6 sec.
Dipper extended .....	2.9 ± 0.5 sec.
Dipper retracted.....	4.0 ± 0.5 sec.
Bucket open.....	2.5 ± 0.5 sec.
Bucket closed .....	4.9 ± 0.5 sec.

## Control valve

Five-element control valve for dipper, boom acceleration, swing, option and right travel.

Four-element control valve for dipper, bucket, boom acceleration and left travel.

Load holding relief valve for boom and dipper.

## Swing

Fixed flow engine with axial pistons.

Automatic disk brakes.

Upperstructure frame swing speed.....	10.4 rpm
Displacement.....	164.8 cc
Work flow.....	217 l/min
Reduction ratio.....	27.143
Brake torque.....	≥ 927 Nm
Minimum brake release pressure.....	29 bar
Permissible motor leak.....	16 l/min

## Travel

Two-speed motor with axial pistons.

Automatic disk brakes.

Low speed.....	3.0 kph
High speed.....	5.1 kph
Gradeability.....	70% (35°)
Tractive effort.....	24 100 daN
Displacement.....	244.3/141.1 cc
Work flow.....	217 l/min
Reduction ratio.....	39.875
Braking torque (reduction gear excluded).....	≥ 902 Nm
Number of sprocket turns (10 turns)	
Mode "S", high speed.....	17.7 ± 0.6 sec.
Mode "S", low speed.....	30.0 ± 0.7 sec.
Permissible deviation in travel over a distance of 20 m	
Mode "H", full speed.....	1 m
Permissible motor leak.....	13 l/min

## Undercarriage

Monobloc frame with fabricated elements.

Lubricated rollers and idler wheels.

Grease track tension.

Weight load on track

with 600 mm track pads.....	0.54 bar
with 700 mm track pads.....	0.48 bar
with 800 mm track pads.....	0.42 bar
Track tension.....	340 to 360 mm

## Attachment

Digging force.....	17 300 daN
Break-out force	
2.65 m dipper.....	13 700 daN
3.20 m dipper.....	12 500 daN
3.65 m dipper.....	10 900 daN

**Weight of components**

Engine .....	512 kg
Hydraulic pump.....	139 kg
Attachment control valve .....	187 kg
Swing motor and reduction gear assembly .....	402 kg
Travel motor and reduction gear assembly.....	365 kg
Boom cylinder.....	235 kg
Dipper cylinder.....	335 kg
Bucket cylinder .....	194 kg
Counterweight .....	5400 kg
Cab .....	254 kg
Turntable.....	543 kg
Upperstructure assembly.....	10 910 kg
Hydraulic swivel .....	31 kg
Frame assembly .....	11 610 kg
Machine without attachment.....	23 070 kg
Attachment .....	5270 kg
Boom assembly .....	2590 kg
Dipper assembly.....	1570 kg
Radiator and oil-cooler assembly .....	165 kg
Fuel reservoir.....	87 kg
Hydraulic reservoir.....	127 kg
Idler wheel .....	154 kg
Upper roller.....	44 kg
Lower roller.....	60 kg
Tension damper .....	497 kg
600 mm track.....	2190 kg
700 mm track.....	2386 kg
800 mm track.....	2580 kg
