Composition of shop manual

The contents of this shop manual are shown together with Form No. in a list.

Note 1: Always keep the latest version of this manual in accordance with this list and utilize accordingly. The marks shown to the right of Form No. denote the following:

- O: New issue (to be filed additionally) •: Revision (to be replaced for each Form No.)
- Note 2: This shop manual can be supplied for each Form No.
- Note 3: To file this shop manual in the special binder for management, handle it as follows:
 - Place a divider on the top of each section in the file after matching the Tub No. with No. indicated next to each Section Name shown in the table below:
 - File overview and other materials in sections in the order shown below and utilize them accordingly.

Γrα	oubleshooting of electrical system (E-mode)	SEN03210-01
	Before carrying out troubleshooting for electrical system	3
	Information in troubleshooting table	
	E-1 When starting switch turned ON, machine monitor displays nothing	8
	E-2 When starting switch turned ON (before starting engine), basic check item lights	s up 10
-	E-3 Engine does not start (Engine does not turn)	12
	E-4 Preheater does not operate	
	E-5 Precaution item lights up while engine is running	
	E-6 Emergency stop item lights up while engine is running	
	E-7 Engine coolant temperature gauge does not indicate normally	
	E-8 Fuel level gauge does not indicate normally	
	E-9 Power train oil temperature gauge (multi-gauge) does not indicate normally	
	E-10 Hydraulic temperature gauge (multi-gauge) does not indicate normally	
	E-11 Contents of display by machine monitor are different from applicable machine	
	E-12 Machine monitor does not display some items	
	E-13 Function switch does not work	
	E-14 Operation mode does not change	
	E-15 Gearshift mode does not change	
	E-16 Customize function does not operate normally	
	E-17 Customize memory function does not normally	
	E-18 Alarm buzzer cannot be stopped	
	E-19 Air conditioner does not operate normally (including air conditioner fault history	
	E-20 When starting switch is turned OFF, service meter is not displayed	
	E-21 Machine monitor cannot be set in service mode	
	E-22 Ripper pin puller cylinder does not operate	
	E-23 Backup alarm does not sound or does not stop	
	E-24 Headlamp, rear lamp, and ripper point lamp do not light up	
	E-25 Windshield wiper and window washer do not operate	
	E-26 KOMTRAX terminal does not operate normally	
	E-28 Gear cannot be shifted	
	E-29 Electric priming pump does not operate or does not stop automatically	
	publeshooting of hydraulic and mechanical system (H-mode)	SEN03211-00
	Information in troubleshooting table	
	H-1 Power is low (Drawbar pull is low)	
	H-2 Machine does not travel (at 2nd or 3rd gear speed)	
	H-3 Machine does not start at any gear speed	6
	H-4 Machine can travel only forward or in reverse	
	H-5 When gear speed or travel direction is changed, time lag is large	
	H-6 Steering is not possibleH-7 Steering is possible only on one side	
	H-8 Steering overrun occurs	
	H-9 Brake does not work	
	H-10 Power train oil is overheated	
	H-11 Speed of all work equipment is low	
	H-12 No work equipment moves	
	H-13 Blade lift speed or power is low	
	H-14 Blade tilt speed or power is low	
	H-15 Ripper lift speed or power is low	
	H-16 Ripper tilt speed or power is low	
	H-17 Hydraulic drift of blade lift is large	
	H-18 Hydraulic drift of blade tilt is large	
	H-19 Hydraulic drift of ripper lift is large	
	H-20 Ripper pin puller cylinder does not operate	
	H-21 Abnormal sound comes out from around work equipment pump	
	H-22 Fan speed is abnormal	
	(Sound and/or vibration are abnormally large or engine over heats)	23

Troubleshooting of engine (S-mode)	SEN03212-01
Method of using troubleshooting chart	
S-1 Starting performance of engine is poor	6
S-2 Engine does not start	
S-3 Engine does not pick up smoothly	
S-4 Engine stops during operation	
S-5 Engine does not rotate smoothly	
S-6 Engine lack output (or lacks power)	
S-7 Exhaust gas is black (incomplete combustion)	
S-8 Oil consumption is excessive (or exhaust gas is blue)	
S-9 Oil becomes dirty quickly	
S-10 Fuel consumption is excessive	
S-11 Oil is in coolant (or coolant spurts back or coolant level goes down)	
S-12 Oil pressure drops	
S-13 Oil level rises (Entry of coolant or fuel)	
S-14 Coolant temperature becomes too high (Overheating)	
S-15 Abnormal noise is made	
S-16 Vibration is excessive	
S-17 Air cannot be bled from fuel circuit

Safety notice (Rev. 2008/08)

Important safety notice

Proper service and repair are extremely important for safe machine operation. The service and repair techniques recommended by Komatsu and described in this manual are both effective and safe. Some of these techniques require the use of tools specially designed by Komatsu for the specific purpose.

To prevent injury to workers, the symbol \triangle is used to mark safety precautions in this manual. The cautions accompanying these symbols should always be followed carefully. If any dangerous situation arises or may possibly arise, first consider safety, and take the necessary actions to deal with the situation.

1. General precautions

- ▲ Mistakes in operation are extremely dangerous. Read the Operation and Maintenance Manual carefully before operating the machine. In addition, read this manual and understand its contents before starting the work.
- Before carrying out any greasing or repairs, read all the safety labels stuck to the machine. For the locations of the safety labels and detailed explanation of precautions, see the Operation and Maintenance Manual.
- 2) Decide a place in the repair workshop to keep tools and removed parts. Always keep the tools and parts in their correct places. Always keep the work area clean and make sure that there is no dirt, water, or oil on the floor. Smoke only in the areas provided for smoking. Never smoke while working.
- When carrying out any operation, always wear safety shoes and helmet. Do not wear loose work clothes, or clothes with buttons missing.
 - Always wear safety glasses when hitting parts with a hammer.
 - Always wear safety glasses when grinding parts with a grinder, etc.
- 4) When carrying out any operation with 2 or more workers, always agree on the operating procedure before starting. Always inform your fellow workers before starting any step of the operation. Before starting work, hang UNDER REPAIR warning signs in the operator's compartment.
- 5) Only qualified workers must carry out work and operation which require license or qualification.
- 6) Keep all tools in good condition, learn the correct way to use them, and use the proper ones of them. Before starting work, thoroughly check the tools, machine, forklift, service car, etc.

- 7) If welding repairs are needed, always have a trained and experienced welder carry out the work. When carrying out welding work, always wear welding gloves, apron, shielding goggles, cap and other clothes suited for welding work.
- 8) Before starting work, warm up your body thoroughly to start work under good condition.
- Avoid continuing work for long hours and take rests at proper intervals to keep your body in good condition. Take rests in specified safe places.

Safety points

_				
	1	Good arrangement Correct work clothes		
	2			
	3	Following work standard		
	4	4 Making and checking signs		
	5	Prohibition of operation and handling by unlicensed workers		
	6	Safety check before starting work Wearing protective goggles (for cleaning or grinding work)		
	7			
	8	Wearing shielding goggles and protectors (for welding work)		
	9	Good physical condition and preparation		
	10	Precautions against work which you are not used to or you are used to too much		

2. Preparations for work

- Before adding oil or making any repairs, park the machine on a hard and level ground, and apply the parking brake and block the wheels or tracks to prevent the machine from moving.
- 2) Before starting work, lower the work equipment (blade, ripper, bucket, etc.) to the ground. If this is not possible, insert the lock pin or use blocks to prevent the work equipment from falling. In addition, be sure to lock all the control levers and hang warning signs on them.
- When disassembling or assembling, support the machine with blocks, jacks, or stands before starting work.
- 4) Remove all mud and oil from the steps or other places used to get on and off the machine. Always use the handrails, ladders or steps when getting on or off the machine. Never jump on or off the machine. If it is impossible to use the handrails, ladders or steps, use a stand to provide safe footing.

3. Precautions during work

- Before disconnecting or removing components of the oil, water, or air circuits, first release the pressure completely from the circuit. When removing the oil filler cap, a drain plug, or an oil pressure pickup plug, loosen it slowly to prevent the oil from spurting out.
- 2) The coolant and oil in the circuits are hot when the engine is stopped, so be careful not to get scalded. Wait for the oil and coolant to cool before carrying out any work on the oil or water circuits.
- 3) Before starting work, stop the engine. When working on or around a rotating part, in particular, stop the engine. When checking the machine without stopping the engine (measuring oil pressure, revolving speed, temperature, etc.), take extreme care not to get rolled or caught in rotating parts or moving parts.
- 4) Before starting work, remove the leads from the battery. Always remove the lead from the negative (–) terminal first.
- 5) When raising a heavy component (heavier than 25 kg), use a hoist or crane. Before starting work, check that the slings (wire ropes, chains, and hooks) are free from damage. Always use slings which have ample capacity and install them to proper places. Operate the hoist or crane slowly to prevent the component from hitting any other part. Do not work with any part still raised by the hoist or crane.

- 6) When removing a cover which is under internal pressure or under pressure from a spring, always leave 2 bolts in diagonal positions. Loosen those bolts gradually and alternately to release the pressure, and then remove the cover.
- When removing components, be careful not to break or damage the electrical wiring. Damaged wiring may cause electrical fires.
- 8) When removing piping, stop the fuel or oil from spilling out. If any fuel or oil drips onto the floor, wipe it up immediately. Fuel or oil on the floor can cause you to slip and can even start fires.
- As a general rule, do not use gasoline to wash parts. Do not use it to clean electrical parts, in particular.
- 10) Be sure to assemble all parts again in their original places. Replace any damaged parts and parts which must not be reused with new parts. When installing hoses and wires, be sure that they will not be damaged by contact with other parts when the machine is operated.
- 11) When installing high pressure hoses, make sure that they are not twisted. Damaged tubes are dangerous, so be extremely careful when installing tubes for high pressure circuits. In addition, check that connecting parts are correctly installed.
- 12) When assembling or installing parts, always tighten them to the specified torques. When installing protective parts such as guards, or parts which vibrate violently or rotate at high speed, be particularly careful to check that they are installed correctly.
- 13) When aligning 2 holes, never insert your fingers or hand. Be careful not to get your fingers caught in a hole.
- 14) When measuring hydraulic pressure, check that the measuring tools are correctly assembled.
- 15) Take care when removing or installing the tracks of track-type machines. When removing the track, the track separates suddenly, so never let anyone stand at either end of the track.
- 16) If the engine is operated for a long time in a place which is not ventilated well, you may suffer from gas poisoning. Accordingly, open the windows and doors to ventilate well.

4. Precautions for sling work and making signs

- Only one appointed worker must make signs and co-workers must communicate with each other frequently. The appointed sign maker must make specified signs clearly at a place where he is well seen from the operator's seat and where he can see the working condition easily. The sign maker must always stand in front of the load and guide the operator safely.
 - Do not stand under the load.
 - Do not step on the load.
- Check the slings before starting sling work.
- 3) Keep putting on gloves during sling work. (Put on leather gloves, if available.)
- 4) Measure the weight of the load by the eye and check its center of gravity.
- 5) Use proper sling according to the weight of the load and method of slinging. If too thick wire ropes are used to sling a light load, the load may slip and fall.
- 6) Do not sling a load with 1 wire rope alone. If it is slung so, it may rotate and may slip out of the rope. Install 2 or more wire ropes symmetrically.
 - A Slinging with 1 rope may cause turning of the load during hoisting, untwisting of the rope, or slipping of the rope from its original winding position on the load, which can result in a dangerous accident.
- 7) Limit the hanging angle to 60°, as a rule. Do not sling a heavy load with ropes forming a wide hanging angle from the hook. When hoisting a load with 2 or more ropes, the force subjected to each rope will increase with the hanging angle. The table below shows the variation of allowable load in kN {kg} when hoisting is made with 2 ropes, each of which is allowed to sling up to 9.8 kN {1,000 kg} vertically, at various hanging angles. When the 2 ropes sling a load vertically, up to 19.6 kN {2,000 kg) of total weight can be suspended. This weight is reduced to 9.8 kN {1,000 kg} when the 2 ropes make a hanging angle of 120°. If the 2 ropes sling a 19.6 kN {2,000 kg} load at a lifting angle of 150°, each of them is subjected to a force as large as 39.2 kN {4,000 kg}.

- 8) When installing wire ropes to an angular load, apply pads to protect the wire ropes. If the load is slippery, apply proper material to prevent the wire rope from slipping.
- 9) Use the specified eyebolts and fix wire ropes, chains, etc. to them with shackles, etc.
- 10) Apply wire ropes to the middle portion of the hook.
 - Slinging near the tip of the hook may cause the rope to slip off the hook during hoisting. The hook has the maximum strength at the middle portion.

- 11) Do not use twisted or kinked wire ropes.
- 12) When lifting up a load, observe the following.
 - Wind in the crane slowly until wire ropes are stretched. When settling the wire ropes with the hand, do not grasp them but press them from above. If you grasp them, your fingers may be caught.
 - After the wire ropes are stretched, stop the crane and check the condition of the slung load, wire ropes, and pads.

- If the load is unstable or the wire rope or chains are twisted, lower the load and lift it up again.
- Do not lift up the load slantingly.
- 13) When lifting down a load, observe the following.
 - When lifting down a load, stop it temporarily at 30 cm above the floor, and then lower it slowly.
 - Check that the load is stable, and then remove the sling.
 - Remove kinks and dirt from the wire ropes and chains used for the sling work, and put them in the specified place.

5. Precautions for using mobile crane

- ★ Read the Operation and Maintenance Manual of the crane carefully in advance and operate the crane safely.
- 6. Precautions for using overhead hoist crane When raising a heavy part (heavier than 25 kg), use a hoist, etc. In Disassembly and assembly, the weight of a part heavier than 25 kg is indicated after the mark of
 - Before starting work, inspect the wire ropes, brake, clutch, controller, rails, over wind stop device, electric shock prevention earth leakage breaker, crane collision prevention device, and power application warning lamp, and check safety.
 - 2) Observe the signs for sling work.
 - 3) Operate the hoist at a safe place.
 - 4) Check the direction indicator plates (east, west, south, and north) and the directions of the control buttons without fail.
 - 5) Do not sling a load slantingly. Do not move the crane while the slung load is swinging.
 - 6) Do not raise or lower a load while the crane is moving longitudinally or laterally.
 - 7) Do not drag a sling.
 - 8) When lifting up a load, stop it just after it leaves the ground and check safety, and then lift it up.
 - 9) Consider the travel route in advance and lift up a load to a safe height.
 - Place the control switch on a position where it will not be an obstacle to work and passage.
 - 11) After operating the hoist, do not swing the control switch.
 - 12) Remember the position of the main switch so that you can turn off the power immediately in an emergency.

- 13) If the hoist stops because of a power failure, turn the power switch OFF. When turning on a switch which was turned OFF by the electric shock prevention earth leakage breaker, check that the devices related to that switch are not in operation state.
- 14) If you find an obstacle around the hoist, stop the operation.
- 15) After finishing the work, stop the hoist at the specified position and raise the hook to at least 2 m above the floor. Do not leave the sling installed to the hook.

7. Selecting wire ropes

 Select adequate ropes depending on the weight of parts to be hoisted, referring to the table below.

Wire ropes (Standard "Z" twist ropes without galvanizing) (JIS G3525, No. 6, Type 6X37-A)

(313 G3323, No. 0, Type 0A37-A)				
Nominal diameter of rope	Allowable load			
mm	kN	ton		
10	8.8	0.9		
12	12.7	1.3		
14	17.3	1.7		
16	22.6	2.3		
18	28.6	2.9		
20	35.3	3.6		
25	55.3	5.6		
30	79.6	8.1		
40	141.6	14.4		
50	221.6	22.6		
60	318.3	32.4		

★ The allowable load is one-sixth of the breaking strength of the rope used (Safety coefficient: 6).
