Index (ALL-0310-001-A-00-A)	00.4
00 Index and foreword	
Index	
Foreword, safety and general information	
Important safety notice	
How to read the shop manual  Explanation of terms for maintenance standard	
Handling equipment of fuel system devices	
Handling of intake system parts	
Handling of hydraulic equipment	
Method of disconnecting and connecting of push-pull type coupler	
Handling of electrical equipment	
How to read electric wire code	
Precautions when performing operation	
Practical use of KOMTRAX	
Standard tightening torque table	
List of abbreviation	
Conversion table	
01 Specification	
Table of contents	
Specifications	
Specification drawing	
Working range drawings	
Specifications	
Weight table	
Table of fuel, coolant, and lubricants	
10 Structure and function	
Table of contents	
Engine and cooling system	
Engine related parts	
PTO	
VFT	10-6
EGR system piping drawing	
EGR system circuit diagram	
EGR valve	10-13
EGR cooler	10-15
KCCV layout drawing	10-17
KCCV ventilator	10-19
KDOC muffler	
Cooling system	
Power train	
Power train system	
Swing circle	
Swing machinery	
Undercarriage and frame	
Track frame	
Idler cushion	
Hydraulic system	
Hydraulic component layout	
Valve control	
Hydraulic tank	
CLSS	
Main pump	
Control valve	
Swing motor	
Travel motor	
Work equipment and swing PPC valve	
Travel PPC valve	10-143

1st-line attachment PPC valve (with EPC valve)	
Solenoid valve	
Attachment circuit selector valve (for low pressure circuit)	10-165
Attachment circuit selector valve (for high pressure circuit)	10-168
Multi-control valve	10-170
Center swivel joint	10-171
PPC circuit accumulator	
Attachment circuit accumulator (for low pressure circuit)	10-174
Attachment circuit accumulator (for high pressure circuit)	
Work equipment	
Work equipment	10-176
Work equipment shim	10-177
Bucket play adjustment shim	10-178
Cab and its attachments	10-179
Cab mount and cab tipping stopper	
ROPS cab	
Electrical system	
Electrical control system	
Machine monitor system	
KOMTRAX system	
Sensor	
20 Standard value tables	
Table of contents	
Standard service value table	
Standard value table for engine	
Standard value table for machine	
Standard value table for electrical system	
30 Testing and adjusting	
Table of contents	
General information on testing and adjusting	
Tools for testing and adjusting	
Sketch of tools for testing and adjusting	
Engine and cooling system	
Testing engine speed	
Testing exhaust gas color	
Testing and adjusting valve clearance	
Testing compression pressure	
Testing blowby pressure	
Testing engine oil pressure	
Testing fuel pressure	
Testing fuel return rate and leakage	
Bleeding air from fuel system	
Testing fuel circuit for leakage	
Handling cylinder cutout mode operation	
Handling cylinder culout mode operation	
Checking and adjusting air conditioner compressor belt tension	
Replacing fan belt	
Writing compensation values at replacement of injector and engine controller	
Power train	
Testing swing circle bearing clearance	
Undercarriage and frame	
Testing and adjusting track shoe tension	
Hydraulic system	
Releasing remaining pressure from hydraulic circuit	
Testing and adjusting oil pressure in work equipment, swing, and travel circuits	
Testing oil pressure of control circuit	
Testing and adjusting oil pressure in pump PC control circuit	
Testing and adjusting oil pressure in pump LS control circuit	
Testing outlet pressure of solenoid valve	30-47

resting PPC valve output pressure	30-48
Adjusting play of work equipment and swing PPC valves	30-50
Isolating the parts causing hydraulic drift in work equipment	
Testing and adjusting travel deviation	30-52
Testing oil leakage	
Bleeding air from hydraulic circuit	30-56
Cab and its attachments	
Checking cab tipping stopper	
Testing, cleaning and lubricating slide door rail and roller	
Adjusting mirrors	
Electrical system	
Special functions of machine monitor	
Adjusting rearview camera angle	
Handling voltage circuit of engine controller	
Handling battery disconnect switch	
Testing diodes

Failure code [DAZ9KQ] A/C Model Selection Abnormality	
Failure code [DAZQKR] CAN2 Discon (Aircon ECU)	. 40-278
Failure code [DB2QKR] CAN2 Discon (Engine Con)	. 40-282
Failure code [DB2RKR] CAN1 Discon (Engine Con)	. 40-286
Failure code [DGH2KB] Hyd Oil Sensor Short Circuit	
Failure code [DHPAMA] Pump Press Sensor Abnormality	. 40-292
Failure code [DHSFMA] Travel Fwd LH PPC Press Sensor Abnormality	. 40-294
Failure code [DHSGMA] Travel Fwd RH PPC Press Sensor Abnormality	. 40-296
Failure code [DHSHMA] Travel Rev LH PPC Press Sensor Abnormality	. 40-298
Failure code [DHSJMA] Travel Rev RH PPC Press Sensor Abnormality	. 40-300
Failure code [DHSKMA] Blade Raise PPC Press Sensor Abnormality	. 40-302
Failure code [DHSLMA] Blade Lower PPC Press Sensor Abnormality	. 40-304
Failure code [DHX1MA] Overload Sensor Abnormality	. 40-306
Failure code [DR21KX] Camera 2 Picture Rev. Drive Abnormality	. 40-307
Failure code [DR31KX] Camera 3 Picture Rev. Drive Abnormality	. 40-309
Failure code [DV20KB] Travel Alarm Short Circuit	. 40-310
Failure code [DW43KA] Travel Speed Sol Open Circuit	. 40-312
Failure code [DW43KB] Travel Speed Sol Short Circuit	. 40-314
Failure code [DW45KA] Swing Brake Sol Open Circuit	. 40-316
Failure code [DW45KB] Swing Brake Sol Short Circuit	. 40-319
Failure code [DW91KA] Travel Junction Sol Open Circuit	. 40-321
Failure code [DW91KB] Travel Junction Sol Short Circuit	. 40-323
Failure code [DWA2KA] Attachment Sol Open Circuit	. 40-325
Failure code [DWA2KB] Attachment Sol Short Circuit	. 40-327
Failure code [DWJ0KA] Merge-divider Sol Open Circuit	. 40-329
Failure code [DWJ0KB] Merge-divider Sol Short Circuit	. 40-331
Failure code [DXA8KA] PC-EPC Sol Open Circuit	. 40-333
Failure code [DXA8KR] PC-FPC Sol Short Circuit	

00-6 PC138USLC-10

Failure code [DXE4KA] Attachment Flow EPC Open Circuit	40-337
Failure code [DXE4KB] Attachment Flow EPC Short Circuit	40-339
Failure code [DY20KA] Wiper Working Abnormality	40-341
Failure code [DY20MA] Wiper Parking Abnormality	
Failure code [DY2CKB] Washer Drive Short Circuit	
Failure code [DY2DKB] Wiper Drive (Fwd) Short Circuit	40-347
Failure code [DY2EKB] Wiper Drive (Rev) Short Circuit	
Troubleshooting of electrical system (E-mode)	
E-1 Engine does not start (Engine does not crank)	
E-2 Manual preheating system does not work	
E-3 While preheating is working, preheating monitor does not light up	
E-4 When starting switch is turned to ON position, machine monitor displays nothing	40-362
E-5 When starting switch is turned to ON position (with engine stopped), engine oil level	
monitor lights up in yellow	
E-6 Engine coolant temperature monitor lights up in white while engine is running	
E-7 Hydraulic oil temperature monitor lights up in white while engine is running	40-367
E-8 Charge level monitor lights up while engine is running	40-368
E-9 Fuel level monitor lights up in red while engine is running	
E-10 Engine coolant temperature monitor lights up in red while engine is running	40-370
E-11 Hydraulic oil temperature monitor lights up in red while engine is running	40-371
E-12 Engine oil pressure monitor lights up in red while engine is running	40-372
E-13 Fuel gauge display does not move from minimum or maximum	40-373
E-14 Fuel gauge indicates incorrect amount (indicates neither full nor empty)	40-374
E-15 Engine coolant temperature gauge display does not move from minimum or	
maximum	40-375
E-16 Engine coolant temperature gauge indicates incorrect temperature (indicates neith	ier
minimum nor maximum)	
E-17 Hydraulic oil temperature gauge does not move from minimum or maximum	
E-18 Hydraulic oil temperature gauge indicates incorrect temperature (indicates neither	
minimum nor maximum)	40-379
E-19 Some areas of machine monitor screen are not displayed	
E-20 Function switch does not work	
E-21 Automatic warm-up system does not operate (in cold season)	
E-22 Auto-deceleration monitor does not light up, or does not go out, while auto-deceler	
switch is operated	
E-23 Auto-deceleration function does not operate or is not canceled while lever is	
operated	40-384
E-24 Working mode selection screen is not displayed while working mode selector switch	
operated	
E-25 Setting of engine and hydraulic pump is not changed while working mode is	
changed	40-386
E-26 Travel speed monitor does not change while travel speed switch is operated	
E-27 Travel speed does not change while travel speed selection is changed	
E-28 Alarm buzzer does not stop sounding	
E-29 Service meter is not displayed, while starting switch is in OFF position	
E-30 Service mode cannot be selected	
E-31 Any of work equipment, swing and travel does not work	
E-32 Any of work equipment, swing and travel cannot be locked	40-394
E-33 Upper structure does not swing while swing parking brake cancel switch is set to	40.206
CANCEL position	
E-34 Swing brake does not operate while swing parking brake cancel switch is set to NO	
position	
E-35 Alarm does not sound during travel	
E-36 Alarm does not stop sounding while machine is stopped	
E-37 Horn does not sound	
E-38 Horn does not stop sounding	40-403
E-39 Wiper monitor does not light up, or does not go out, while wiper switch is	40.45
operated	
F-40 Winer does not operate while winer switch is operated	4()-405

	E-41 Window wasner does not operate while window wasner switch is operated	
	E-42 Boom Lower is not displayed correctly with monitoring function	. 40-408
	E-43 Arm OUT is not displayed correctly with monitoring function	. 40-410
	E-44 Arm IN is not displayed correctly with monitoring function	. 40-412
	E-45 Boom Raise is not displayed correctly with monitoring function	
	E-46 Bucket Curl is not displayed correctly with monitoring function	
	E-47 Bucket Dump is not displayed correctly with monitoring function	
	E-48 Swing is not displayed correctly with monitoring function	
	E-49 Travel is not displayed correctly with monitoring function	
	E-50 Service is not displayed correctly with monitoring function	
	E-51 Attachment hydraulic circuit cannot be changed	
_	E-52 KOMTRAX system does not operate normally	
Iro	ubleshooting of hydraulic and mechanical system (H-mode)	
	Information described in troubleshooting table (H-mode)	
	System chart of hydraulic and mechanical systems	
	Failure mode and cause table	. 40-431
	H-1 All of work equipment, swing and travel operation lacks speed or power	. 40-439
	H-2 Engine speed drops significantly or engine stalls	. 40-441
	H-3 Any of work equipment, swing and travel does not work	
	H-4 Unusual sound is heard from around hydraulic pump	
	H-5 Fine control performance or response is poor	
	H-6 Boom speed or power is low	
	H-7 Arm speed or power is low	
	H-8 Bucket speed or power is low	
	H-9 Work equipment does not move in single operation	
	H-10 Hydraulic drift of boom is large	
	H-11 Hydraulic drift of arm is large	
	H-12 Hydraulic drift of bucket is large	. 40-455
	H-13 Time lag of work equipment is large	. 40-456
	H-14 In combined operation of work equipment, equipment having heavier load moves	
	slower	. 40-458
	H-15 In combined operation of swing and boom RAISE, boom rising speed is low	
	H-16 In combined operation of swing and travel, travel speed drops largely	
	H-17 Machine does not travel straight	
	H-18 Travel speed is slow	
	H-19 Machine is hard to steer or travel power is low	
	H-20 Travel speed does not change, or travel speed is too slow or fast	
	H-21 One of tracks does not run	
	H-22 Upper structure does not swing to the right or left	
	H-23 Upper structure swing only to the right or left	
	H-24 Swing acceleration or swing speed is low in both directions (right and left)	. 40-473
	H-25 Swing acceleration performance is poor or swing speed is slow in only one	
	direction	. 40-474
	H-26 Upper structure overruns excessively when it stops swinging (both right and	
	left)	. 40-475
	H-27 Upper structure overruns excessively when it stops swinging (either right or left)	
	H-28 Shock is large when upper structure stops swinging	
	H-29 Large unusual noise is heard when upper structure stops swinging	
	H-30 Swing drift on a slope is large while swing parking brake is applied	
	H-31 Swing drift on a slope is large while swing parking brake is released	
	H-32 Attachment hydraulic circuit cannot be changed while attachment is installed	
_	H-33 Oil flow in attachment circuit cannot be controlled	
Iro	ubleshooting of engine (S-mode)	
	Information mentioned in troubleshooting table (S mode)	
	S-1 Engine does not crank when starting switch is turned to START position	. 40-484
	S-2 Engine cranks but no exhaust smoke comes out	. 40-485
	S-3 Fuel is being injected but engine does not start (misfiring: engine cranks but does not	
	start)	. 40-486
	S-4 Engine startability is poor	

00-8 PC138USLC-10

S-5 Engine does not pick up smoothly	
S-6 Engine stops during operation	
S-7 Engine runs rough or is unstable	
S-8 Engine lacks power	
S-9 Exhaust smoke is black	
S-10 Engine oil consumption is excessive	
S-11 Oil becomes contaminated quickly	
S-12 Fuel consumption is excessive	
S-13 Oil is in coolant (or coolant spurts or coolant level goes down)	
S-14 Oil pressure drops	
S-15 Fuel mixes into engine oil	
S-16 Water mixes into engine oil (milky)S-17 Coolant temperature rises too high (overheating)	
S-17 Coolant temperature rises too nigh (overheating)	
S-19 Vibration is excessive	
S-20 Air cannot be bled from fuel circuit

## Foreword, safety and general information (ALL-0370-001-A-00-A)

### Important safety notice (ALL-1120-012-A-01-A)

(Rev. 2012/10)

- Appropriate servicing and repair are extremely important to ensure safe operation of the machine. The shop manual describes the effective and safe servicing and repair methods recommended by Komatsu.
   Some of these methods require the use of the special tools designed by Komatsu for the specific purpose.
- The symbol mark is used for such matters that require special cautions during the work. The work indicated by the caution mark should be performed according to the instructions with special attention to the cautions. Should hazardous situation occur or be anticipated during such work, be sure to keep safe first and take every necessary measure.

#### **General precautions**

- ▲ Inappropriate handling causes an extreme danger. Read and understand what is described in the operation and maintenance manual before operating the machine. Read and understand what is described in this manual before starting the work.
- Before performing any greasing or repairs, read all the safety labels stuck to the machine. For the locations of the safety labels and detailed explanation of precautions, see the operation and maintenance manual.
- Locate a place in the repair workshop to keep the tools and removed parts. Always keep the tools and parts in their correct places. Always keep the work area clean and make sure that there is no dirt, water or oil on the floor. Smoke only in the areas provided for smoking. Never smoke while working.
- When performing any work, always wear the safety shoes and helmet. Do not wear loose work cloths, or clothes with buttons missing.
  - 1. Always wear the protective eyeglasses when hitting parts with a hammer.
  - 2. Always wear the protective eyeglasses when grinding parts with a grinder, etc.
- When performing any work with two or more workers, always agree on the working procedure before starting. While working, always keep conversations of the work between your fellow workers and your self on any step of the work. During the work, hang the warning tag of "UNDER WORKING" in the operator's compartment.
- Only qualified workers must perform the work and operation which require license or qualification.
- Keep the tools in good condition. And learn the correct way to use the tools, and use the proper ones among them. Before starting the work, thoroughly check the tools, lift truck, service vehicle, etc.
- If welding repairs is required, always have a trained and experienced welder with good

- knowledge of welding perform the work. When performing welding work, always wear welding gloves, apron, shielding goggles, cap, etc.
- Before starting work, warm up your body thoroughly to start work under good condition.
- Avoid continuing work for long hours and take rests with proper intervals to keep your body in good condition. Take a rest in a specified safe place.

#### Safety points

- 1 Good arrangement
- 2 Correct work clothes
- 3 Observance of work standard
- 4 Practice of making and checking signals
- 5 Prohibition of operation and handling by unlicensed workers
- 6 Safety check before starting work
- 7 Wearing protective goggles (for cleaning or grinding work)
- 8 Wearing shielding goggles and protectors (for welding work)
- **9** Good physical condition and preparation
- Precautions against work which you are not used to or you are used to too much

#### **Preparation**

- Before adding oil or making any repairs, place the machine on a firm and level ground, and apply the parking brake and chock the wheels or tracks to prevent the machine from moving.
- Before starting work, lower the work equipment (blade, ripper, bucket, etc.) to the ground. If it is not possible to lower the equipment to the ground, insert the lock pin or use blocks to prevent the work equipment from falling. And be sure to lock all the work equipment control levers and hang a warning tag on them.
- When performing the disassembling or assembling work, support the machine securely with blocks, jacks, or stands before starting the work.
- Remove all of mud and oil from the steps or other places used to get on and off the machine completely. Always use the handrails, ladders of

steps when getting on or off the machine. Never jump on or off the machine. When the scaffold is not provided, use steps or stepladder to secure your footing.

#### **Precautions during work**

- For the machine equipped with the battery disconnect switch, check that the system operating lamp is turned off before starting the work. Then, turn the battery disconnect switch to OFF (○) position and remove the switch key. For the machine not equipped with the battery disconnect switch, remove the cable from the battery before starting the work. Be sure to remove the negative end (-) of the battery cable first.
- Release the remaining pressure in the circuits completely before the work when the parts in the circuits of oil, fuel, coolant and air are disconnected or removed. When the cap of the oil filter, drain plug or oil pressure pickup plug is removed, loose them slowly to prevent the oil from spurting out.
- When removing or installing the checking plug or the piping in the fuel circuit, wait 30 seconds or longer after the engine is shut down and start the work after the remaining pressure is released from the fuel circuit.
- Immediately after the engine is shut down, the coolant and oil in the circuits are hot. Be careful not to get scalded by the hot coolant and oil. Start the work after checking that the coolant and oil are cooled down sufficiently.
- Start the work after the engine is shut down. Be sure to shut down the engine when working on or around the rotating parts in particular. When checking the machine without shutting down the engine (measuring oil pressure, rotational speed, oil or coolant temperature), take extreme care not to get caught in the rotating parts or the working equipment.
- The hoist or crane must be used to sling the components weighing 25 kg or heavier. Check the slings (wire rope, nylon sling, chain and hook) for damage before the work. Use the slings with ample capacity and install them to the proper places. Operate the hoist or crane slowly to prevent the component from hitting any other part. Do not work with any part still raised by the hoist or crane.
- When removing the part which is under internal pressure or reaction force of the spring, always leave 2 bolts in diagonal positions. Loosen those 2 bolts gradually and alternately and release the pressure, then, remove the part.
- When removing the part, be careful not to break or damage the electrical wiring. The damaged wiring may cause electrical fires.

- When removing piping, prevent the fuel or oil from spilling out. If any fuel or oil drips onto the floor, wipe it off immediately. Fuel or oil on the floor can cause you to slip and can even cause fires
- As a general rule, do not use gasoline to wash parts. Do not use gasoline to clean the electrical parts, in particular.
- Reinstall the parts removed to their original places. Replace the damaged parts and the parts which must not be used with new ones.
   When installing the hoses and wiring harnesses, be careful that they are not damaged by contacting with other parts when the machine is operated.
- When connecting the high pressure hoses and tubes, make sure that they are not twisted. The damaged high pressure hoses and tubes are very dangerous when they are installed. So, be extremely careful when connecting the high pressure pipings. In addition, check that their connections are correct.
- When assembling or installing the parts, be sure to tighten the bolts to the specified torque. When installing the protective parts such as guards, or the parts which vibrate violently or rotate at high speeds, be sure to check that they are installed correctly.
- When aligning 2 holes, never insert your fingers or hand into the holes. Align the holes with care so that your fingers are not caught in the hole.
- When measuring hydraulic pressure, check that the measuring tools are correctly installed.
- Pay attention to safety when removing and installing the tracks of the track type machines.
   When removing the track, it separates suddenly.
   The workers should not stand at either end of the track.
- If the engine is operated for a long time in a closed place which is not ventilated well, you may suffer from gas poisoning. Accordingly, open the windows and doors to ventilate the place well.

## Precautions for slinging work and making signals

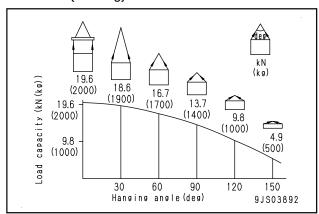

- Only one appointed worker must make signals and co-worker must communicate with each other frequently. The appointed signaler must make specified signals clearly at the place where the signaler is well seen from the operator's seat and where the signaler can see the working condition easily. The signaler must always stand in front of the load and guide the operator safely.
  - 1. Do not stand under the load.
  - 2. Do not step on the load.
- Check the slings before starting sling work.

**00-14** PC138USLC-10

- Keep putting on the gloves during sling work.
   (Put on the leather gloves, if available.)
- Measure the weight of the load by the eye and check its center of gravity.
- Use the proper sling according to the weight of the load and method of slinging. If too thick wire ropes are used to sling a light load, the load may slip and fall.
- Do not sling a load with 1 wire rope only. If do so, the load may rotate or the sling gets loose and the sling may slip off. Install 2 or more wire ropes symmetrically.

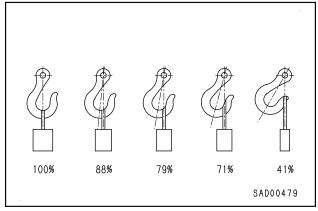

A Slinging with one rope may cause turning of the load during hoisting, untwisting of the rope, or slipping of the rope from its original slinging position on the load, which can result in a dangerous accident.

- Hanging angle must be 60 degrees or smaller as a rule.
- When hanging a heavy load (25kg or heavier), the hanging angle of the rope must be narrower than that of the hook.
  - ★ When slinging a load with 2 ropes or more, the larger the hanging angle is, the larger the tension of each rope. The figure bellow shows the variation of allowable load in kN {kg} when hoisting is made with 2 ropes, each of which is allowed to sling up to 9.8 kN {1000kg} a load vertically, at various hanging angles. When the 2 ropes sling a load vertically, up to 19.6 kN {2000 kg} of total weight can be suspended. This weight is reduced to 9.8 kN {1000 kg} when the 2 ropes make a hanging angle of 120 degrees. If the two ropes sling a 19.6 kN {2000 kg} load at a hanging angle of 150 degrees, each rope is subjected to a force as large as 39.2 kN {4000 kg}.

 When installing wire ropes to an angular load, apply pads to protect the wire ropes. If the load is slippery, apply proper material to prevent the wire rope from slipping.

- Use the specified eye bolts and fix wire ropes, chains, etc. to them with shackles, etc.
- Apply wire ropes to the middle part of the hook.
  - ★ Slinging near the tip of the hook may cause the rope to slip off the hook during hoisting. The strength of the hook is maximum at its central part.

- Do not use twisted or kinked wire ropes.
- When slinging up a load, observe the following.
  - Wind up the rope slowly until the wire rope tensions. When putting your hands on the wire ropes, do not grasp them but press them down from above. If you grasp them, your fingers may be caught.
  - 2. After the wire ropes are stretched, stop the crane and check the condition of the slung load, wire ropes, and pads.
  - 3. If the load is unstable or the wire rope or chains are twisted, lower the load and lift it up again.
  - 4. Do not lift up the load at an angle.
- When lowering a load, pay attention to the following.
  - When lifting down a load, stop it temporarily at 30 cm above the floor, and then lower it slowly.
  - 2. Check that the load is stable, and then remove the sling.
  - 3. Remove kinks and dirt from the wire ropes and chains used for the sling work, and put them in the specified place.

#### Precautions for using mobile crane

★ Read the Operation and Maintenance Manual of the crane carefully in advance and operate the crane safely.

Precautions for using overhead traveling crane

The hoist or crane must be used to sling the components weighing 25 kg or heavier. A part weighing 25 kg or heavier in "disassembly and assembly" section is

indicated with the symbol of

- Before starting work, check the wire ropes, brake, clutch, controller, rails, over winding prevention device, ground fault circuit interrupter for electric shock prevention, crane collision prevention device, and energizing warning lamp, and check the following safety items.
- Observe the signals for sling work.
- Operate the hoist at a safe place.
- Be sure to check the directions of the direction indication plate (north, south, east and west) and the operating button.
- Do not sling a load at an angle. Do not move the crane while the slung load is swinging.
- Do not raise or lower a load while the crane is moving longitudinally or laterally.
- Do not drag a sling.
- When lifting up a load, stop it just after it leaves the ground and check safety, and then lift it up.
- Consider the travel route in advance and lift up a load to a safe height.
- Place the control switch in a position where it will not be an obstacle to work and passage.
- After operating the hoist, do not swing the control switch.
- Remember the position of the main switch so that you can turn off the power immediately in an emergency.
- Shut down the main switch when the hoist stops because of a blackout. When turning on a switch which is turned OFF by the ground fault circuit interrupter for electric shock prevention, check that the devices related to that switch are not in operating condition.
- If you find an obstacle around the hoist, stop the operation.
- After finishing the work, stop the hoist at the specified position and raise the hook to at least 2 meters above the floor. Do not leave the sling attached to the hook.

#### Selecting wire ropes

 Select adequate ropes depending on the weight of the parts to be hoisted, referring to the table below

Wire rope (JIS G3525, 6 x 37 - Type A)

(Standard Z twist wire ropes without galvanizing)

Nominal diameter of rope	Allowable load	
mm	kN	ton
10	8.8	0.9
12	12.7	1.3
14	17.3	1.7
16	22.6	2.3
18	28.6	2.9
20	35.3	3.6
25	55.3	5.6
30	79.6	8.1
40	141.6	14.4

Nominal diameter of rope	Allowable load	
mm	kN	ton
50	221.6	22.6
60	318.3	32.4

★ The allowable load is calculated as one sixth of the breaking load of the rope to be used (safety coefficient: 6).

Precautions for disconnecting and connecting hoses and tubes in air conditioner circuit

#### Disconnection

★ When replacing the air conditioner unit, air conditioner compressor, condenser or receiver drier, etc., collect the refrigerant (air conditioner gas: R134a) from the air conditioner circuit before disconnecting the air conditioner hoses.

- ★ Ask a qualified person for collecting, adding and filling operations of the refrigerant (air conditioner gas: R134a). (Only registered persons can work.)
- ★ Never release the refrigerant (air conditioner gas: R134a) to the atmosphere.
- If refrigerant gas (air conditioner gas: R134a) gets in your eyes, you may lose your sight. And if it touches your skin, you may suffer from frostbite. Put on protective eyeglasses, gloves and working clothes with long sleeves while collecting the refrigerant or filling the air conditioner circuit with the refrigerant.
- When loosening the nuts fixing air conditioner hoses and tubes, be sure to use 2 wrenches; use one wrench to fix and use the other one to loosen the nut.

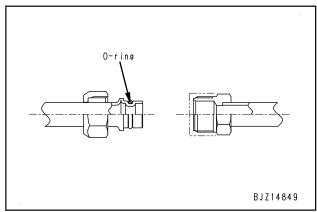

#### Connection

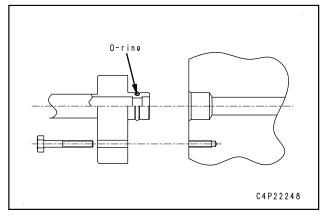

- When installing the hose for the air conditioner circuit, take care not to allow invasion of dirt, dusts and water into the hose.
- Check that the O-rings are fitted to the joints when connecting the air conditioner piping.
- Once an O-ring is used, it is deformed and deteriorated. Accordingly, do not reuse it.
- When removing the O-rings, use a soft tool so that the piping is not damaged.
- Check that the O-ring is not damaged or deteriorated.
- Apply compressor oil for refrigerant (R134a) to the O-ring.
  - ★ However, do not apply oil to the threaded portion of a bolt, nut or union.

00-16 PC138USLC-10

Manufacturer	Part name
DENSO	ND-OIL8
VALEO THERMAL SYSTEMS	ZXL100PG (equivalent to PAG46)
SANDEN	SP-10

- When tightening nuts of the air conditioner hoses and tubes, be sure to use 2 wrenches. Use one wrench to fix and tighten the nut with the other wrench to the specified torque (Use a torque wrench for tightening).
- ★ Example of fitting of O-ring
  - An O-ring is fitted to every joint of the air conditioner piping.

For tightening torques, see "Others", "Precautions for disconnection and connection of air conditioner piping".

Foreword, safety and general information

#### Fire prevention (ALL-0000-001-K-27-A)

#### Action if fire occurs (ALL-0000-17A-K-01-A)

- Turn the starting switch to OFF position to stop the engine.
- Use the handrails and steps to get off the machine.
- Do not jump off the machine. You may fall or suffer serious injury.
- The fume generated by a fire contains harmful materials which have a bad influence on a human body when they are sucked.
   Don't breathe a fume.
- After a fire, there may be harmful compounds left. If it touches your skin it may have a bad influence on your body.

Be sure to wear rubber gloves when handle the materials left after the fire.

The material of the gloves, which is recommended is polychloroprene (Neoprene) or polyvinyl chloride (in the lower temperature environment).

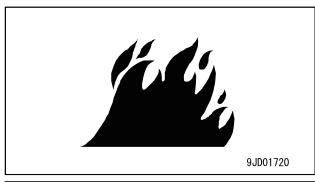

When wearing cotton-work-gloves, wear rubber gloves under them.

#### Prevent fire (ALL-0000-17B-K-03-A)

## Fire caused by fuel, oil, coolant or window washer fluid

Do not bring any flame or fire close to flammable substances such as fuel, oil, coolant or window washer fluid. There is danger that they may catch fire. Always observe the following.

- Do not smoke or use any flame near fuel or other flammable substances.
- Shut down the engine before adding fuel.
- Do not leave the machine when adding fuel or oil
- · Tighten all the fuel and oil caps securely.
- Be careful not to spill fuel on overheated surfaces or on parts of the electrical system.
- After adding fuel or oil, wipe up any spilled fuel or oil.
- Put greasy rags and other flammable materials into a safe container to maintain safety at the workplace.
- When washing parts with oil, use a nonflammable oil. Do not use diesel oil or gasoline. There is danger that they may catch fire.
- Do not weld or use a cutting torch to cut any pipes or tubes that contain flammable liquids.
- Determine well-ventilated areas for storing oil and fuel. Keep the oil and fuel in the specified place and do not allow unauthorized persons to enter.
- When performing grinding or welding work on the machine, move any flammable materials to a safe place before starting.

#### Fire caused by accumulation or attachment of flammable material

- Remove any dry leaves, chips, pieces of paper, coal dust, or any other flammable materials accumulated or attached to or around the engine exhaust manifold, muffler, or battery, or on the undercovers.
- To prevent fires from being caught, remove any flammable materials such as dry leaves, chips, pieces of paper, coal dust, or any other flammable materials accumulated around the cooling system (radiator, oil cooler) or on the undercover.

#### · Fire coming from electric wiring

Short circuits in the electrical system can cause fire. Always observe the following.

- Keep all the electric wiring connections clean and securely tightened.
- Check the wiring every day for looseness or damage. Reconnect any loose connectors or refasten wiring clamps. Repair or replace any damaged wiring.

### • Fire caused by piping

Check that all the clamps for the hoses and tubes, guards, and cushions are securely fixed in position.

If they are loose, they may vibrate during operation and rub against other parts. There is danger that this may lead to damage to the hoses and cause high-pressure oil to spurt out, leading to fire and serious personal injury or death.

#### Fire around the machine due to highly heated exhaust gas

This machine is equipped with KDPF (Komatsu Diesel Particulate Filter).

00-18 PC138USLC-10
