How to use the present publication

The present workshop manual and training handbook doubles as material for the theoretical part of our service training courses and as reference book for skilled construction equipment mechanics in the workshop and in the field.

The present publication breaks down into two sections :

Section 1

Corresponds to the operators manual and includes a description of the inspection and maintenance operations and technical instructions.

Section 2

Comprises functional descriptions and repair instructions.

For repair instructions of units and part assemblies that go beyond the scope of the present handbook refer to the relevant repair manuals that are available when attending the relevant training course.

All technical data, descriptions of units and illustrations are based on information applicable at the time of printing of this publication or any amendment to it.

Specifications are subject to change without notice, to make allowance for continuous product development.

No claim whatever can be derived from the information contained in this publication.

TABLE OF CONTENTS

	Page
Preface	0-2
Description of the machine	0-7
Machine identification	0-8
Noise emission levels; Vibration levels	0-11
Dimensions, weights	0-12
Loading and bracing	0-16
Safety precautions	
Warning information and symbols	1-1
Use as intended	1-1
Organizational measures	1-1
Personnel selection, qualification and basic duties	1-2
Notes on safety in particular phases of operation	1-3
References to specific hazards	1-6
Hauling, towing and re-commissioning	1-8
Operation	1-9
Safety covers	1-9
Genuine HANOMAG spare parts	1-9
Parking the machine	1-10
Articulation lock	1-10
Locking the control levers; Supporting the engine cover	1-13
Safety precautions: Machines with forks	1-15
Driving; handling and stacking loads	1-16
Environmentally acceptable use of the machine	1-17

TABLE OF CONTENTS

	Page
Instruments and controls	2-3
Symbols	2-4
Starter switch; Socket	2-7
Service hour meter; Engine coolant temperature gauge; Fuel gauge; Fuel tank	2-8
Warning lights for parking brake, battery charging, engine oil pressure; Air cleaner service indicator	2-11
Lighting; Turn signals; Horn	2-12
Windscreen wiper, windscreen washer	2-15
Cab doors	2-16
Operator's seat	2-19
Stowage compartment; Engine cover	2-20
Heating and ventilating system	2-23
Operation	
Starting and stopping the engine; Flame start system	3-2
Transmission lever	3-5
Accelerator pedal; Brake pedal	3-6
Parking brake; Steering system	3-9
Stopping the machine	3-10
Driving on the road	3-13
Towing the machine	3-14
Loader hydraulics	
Control levers	3-17
Arm rest; Locking the control levers	3-18
Bucket position indicator	3-21
Quick-attach coupler	3-22
Quick-attach coupler (4-in-1 bucket)	3-25

INSPECTION AND MAINTENANCE	
Running-in period	4-1
Inspection and maintenance chart	4-3
Lubricant, fuel and coolant specifications; refill capacities	4-4
Lubricants: Engine oils, hydraulic oils, gear oils.....	4-5
Diesel fuels.....	4-6
Cooling system protection	4-7
 Description of the inspection and maintenance operations	
Engine	Oil level 4-8
	Oil change; Oil filter element; Crankcase breather .. 4-11
	Valve clearance; Fuel injectors..... 4-12
	Drive belt tension..... 4-16
Fuel system	Fuel tank 4-19
	Water separator 4-20
	Fuel filter 4-23
	Priming the fuel system 4-24
Cooling system	Coolant level..... 4-28
	Changing the coolant..... 4-31
	Cleaning the radiator..... 4-31
Air cleaner	Main filter element 4-32
	Safety element 4-39
Battery	Electrolyte level and state of charge..... 4-40
Front axle	Oil level; Oil change..... 4-43
Rear axle	Oil level; Oil change..... 4-44
Transfer gear	Oil level; Oil change..... 4-47
Service brake	Oil level 4-51
	Changing the oil; Bleeding..... 4-52
	Brake disc wear 4-55
Parking brake	Adjusting 4-59
Hydraulic system	Oil level; Adding oil; Pressurizing the oil tank 4-60
	Oil change..... 4-63
	Filter elements 4-64
Lubricating the machine	Articulation joint, steering cylinder; Door hinges 4-67
	Universal shafts 4-68
Lubricating the equipment	Loader arms; Bucket cylinder; Tilt lever;
	Tilt link; Lift cylinder; Quick-attach coupler 4-71
System pressures	Checking..... 4-72

Order of Groups

1.	Test certificate and measuring points	6-1
2.	Tightening torques; general information	7-1
3.	Engine	8-1
4.	Drive system	9-1
5.	Steering system	10-1
6.	Loader hydraulic system	11-1
7.	Frame	12-1
8.	Axles and brakes	13-1

DESCRIPTION OF THE MACHINE

This wheel loader is a result of continuous product development and extension of our line of tried and tested advanced-design wheel loaders.

The machine consists of a front and a rear frame which are connected by an oscillating joint to allow wide articulation to either side. Steering of the machine is by a hydrostatic power steering system. The front frame supports the working equipment. The rear frame with integrated hydraulic oil tank supports the engine, the hydrostatic drive and the operator's cab.

The water-cooled diesel engine uses a direct injection fuel system and provides economy and reliability of operation.

Engine power is transferred to the drive axles through a hydrostatic drive system using a variable-displacement pump and a variable-displacement motor. The single-stage transfer gear is mounted at the rear axle. Directional changes are effected by reversing the direction of delivery of the variable-displacement pump. Control of the two-stage drive system is electric with full power shifting.

The service brake is designed as a hydrostatic brake. Operation of the brake pedal (inching pedal) produces the braking action by means of a reduction of oil flow. The inching valve can be used to achieve modulated deceleration of the machine, independent of speed and rolling resistance. Additional braking action is produced by hydraulically actuated multiple-disc brakes mounted in the rear axle. The parking brake acts mechanically using the same disc pack.

The machine is equipped with rugged planetary rigid axles featuring self-locking differentials.

The high breakout forces can be attributed essentially to the Z-bar linkage geometry. In tough applications (breakout and tilt back), oil pressure is exerted on the larger piston area of the bucket cylinder to produce high breakout forces. When the bucket is dumped, however, pressure is exerted on the smaller piston area so that a higher dumping speed can be attained.

The wheel loader is one of the new generation of small loaders. Universal application, high performance and economy make the machine a real all-rounder. Because of its excellent manoeuvrability and wide variety of attachments, it will be the right machine in all material handling applications, be it in building firms, large enterprises, wholesale firms, warehouses, industry, municipalities, or in landscaping works.

MACHINE IDENTIFICATION

In order for us to provide you, the customer, with an efficient and speedy after-sales service, please quote the following information when communicating with our After Sales Service organization on any matter regarding operation, maintenance and servicing of the machine:

Machine Model: _____
Serial Number: _____
Engine Number: _____
Machine delivery date: _____
Service hours completed: _____

Enter the details in the spaces provided above so that they are readily available whenever required.

NOISE EMISSION LEVELS

The EC directive requires attachment of two plates indicating the machine noise levels:

According to EC directive 86/662:

1 plate for the sound pressure level $L_{pA} = 78 \text{ dB/A}$

1 plate for the sound power level $L_{WA} = 98 \text{ dB/A}$

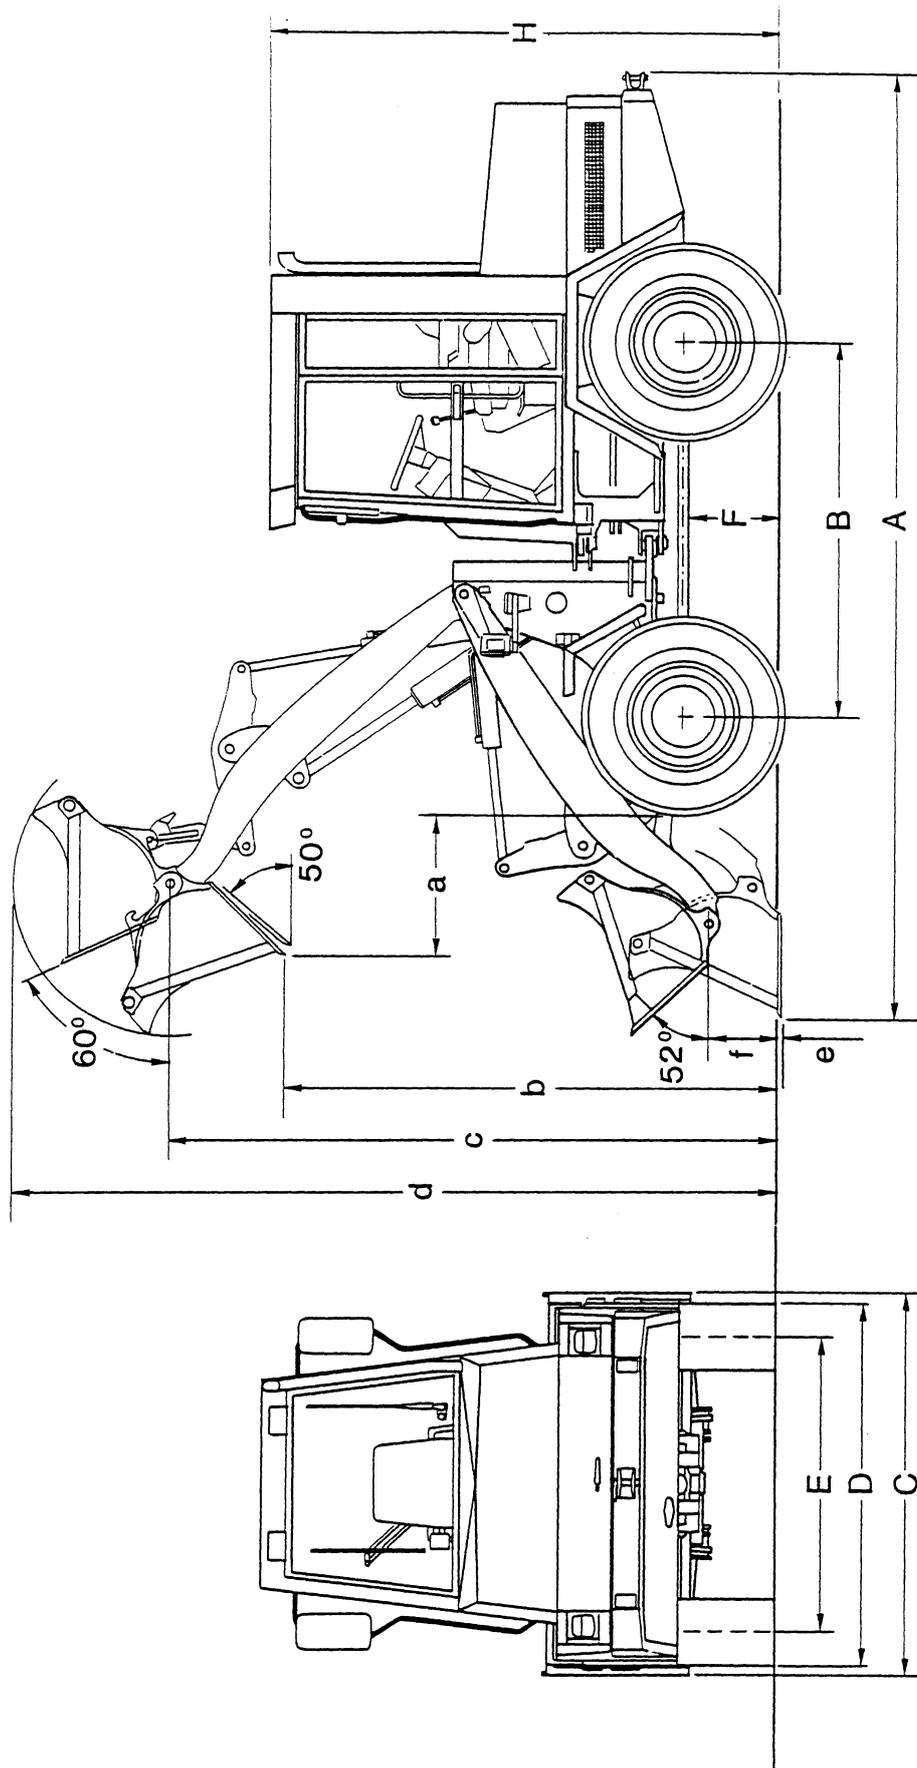

According to RAL UZ 53:

1 plate for the sound pressure level $L_{pA} = 77 \text{ dB/A}$

1 plate for the sound power level $L_{WA} = 98 \text{ dB/A}$

VIBRATION LEVELS

When the machine is used as intended, the evaluated vibration acceleration "a_{zw}" measured in accordance with ISO 2631, Part 1, is between 0.25 m/s² and 2.50 m/s².

Dimensions

Operating data

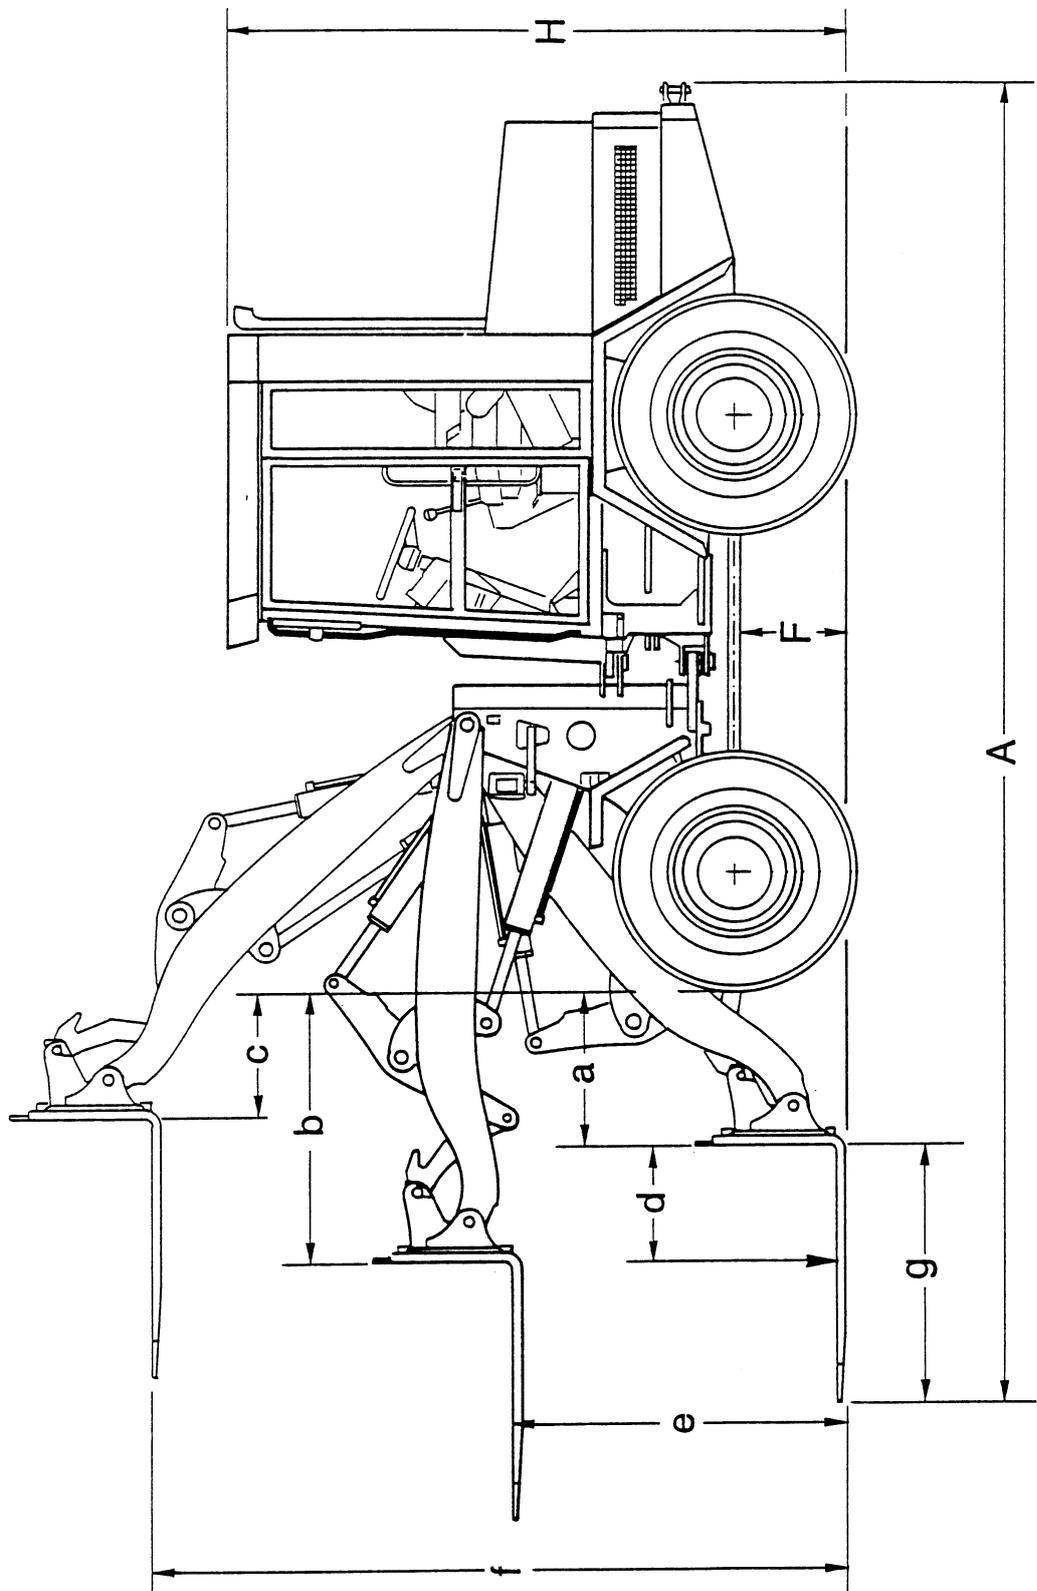

Buckets (SAE heaped)	m ³	0.9 (m.p.bkt.)	1.0	1.25	1.60

2011/1

All specifications refer to 405/70 R20 SPT 9 tyres.

Please enquire for further bucket sizes.

All details and specifications subject to change without notice.

FORKS

a	=	Reach with forks at ground level	810 mm
b	=	Reach with forks at height "e"	1330 mm
c	=	Reach with forks at maximum height	590 mm
d	=	Load centre distance	500 mm
e	=	Maximum reach at 1460 mm height	
f	=	Maximum height	3155 mm
g	=	Fork tine length	1200 mm

	<u>Straight</u>	<u>Articulated</u>
Static tipping load, DIN 24094 *	3320 kg	2900 kg
Load centre distance	500 mm	500 mm
Payload	2660 kg	2320 kg

* Stability factor: 1.25 (level ground, straight)
2.0 (rough terrain)

LOADING AND BRACING

Fig. R 513

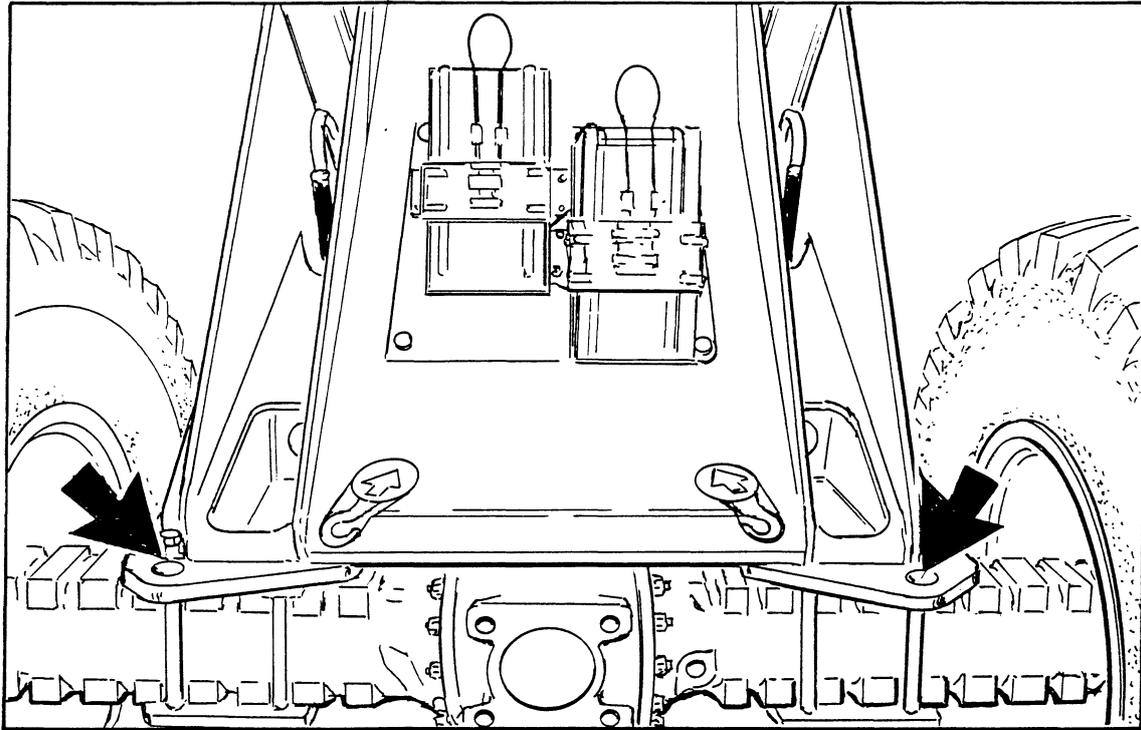

Front attachment points for lifting and bracing.

Fig. R 464

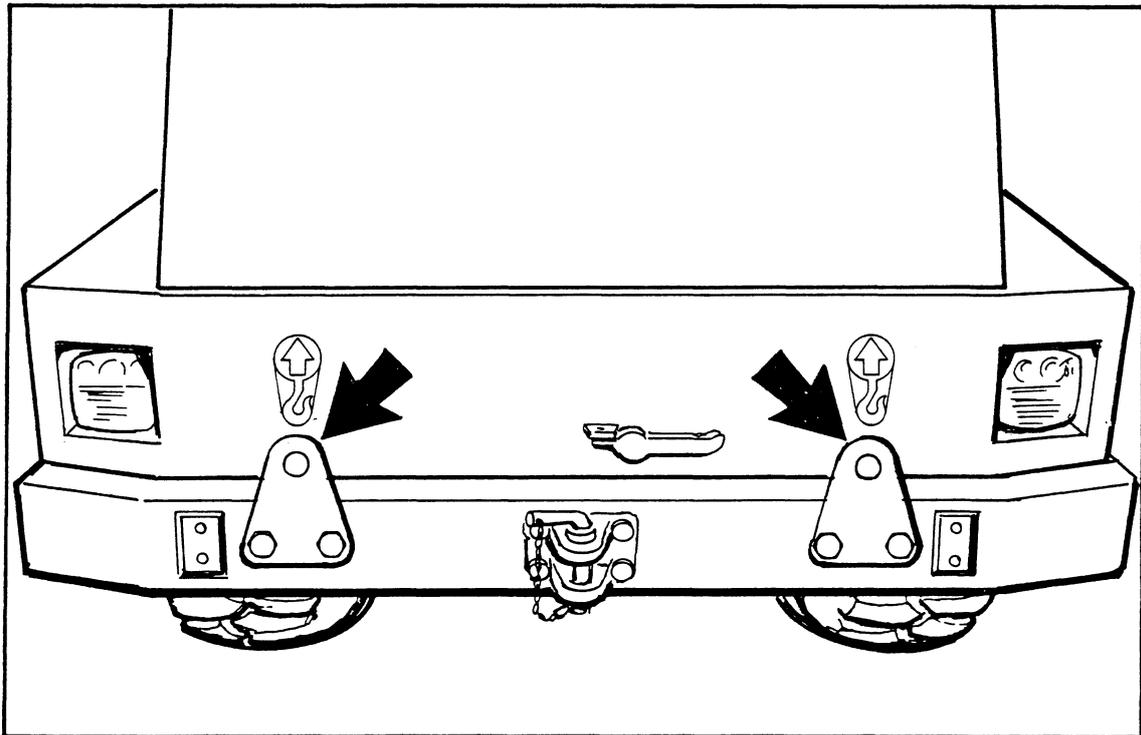

Rear attachment points for lifting and bracing.

Notes:

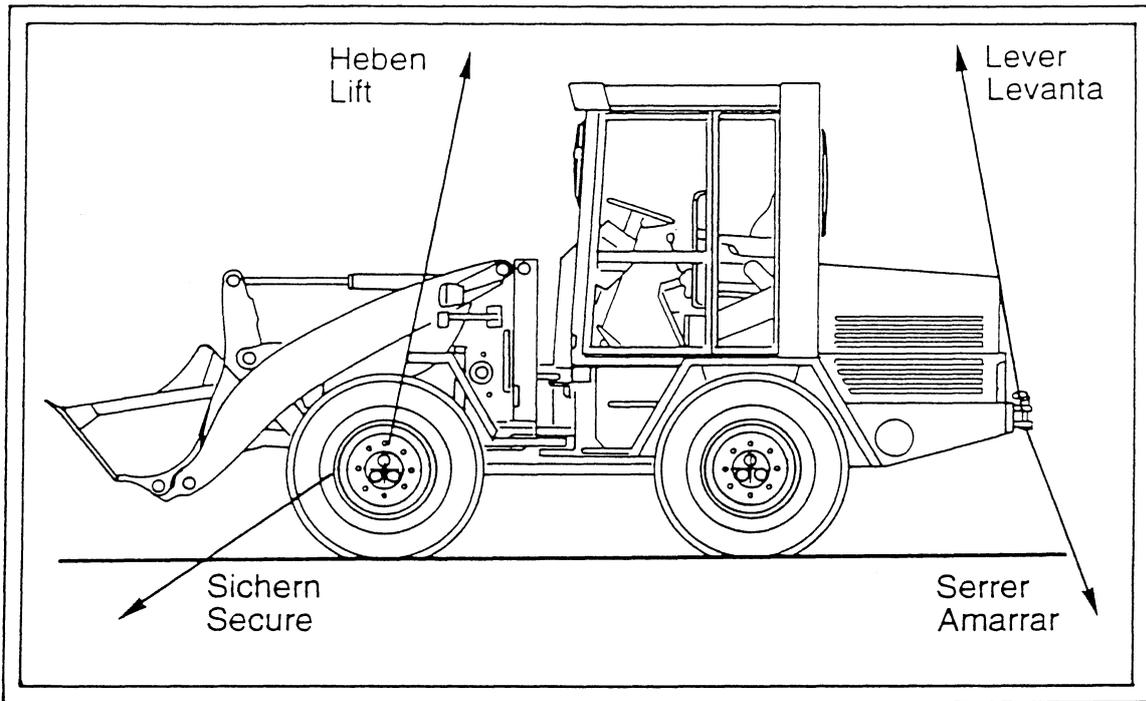

- (a) The lifting brackets are to be found in the stowage compartment of the operator's cab.
- (b) For bracing purposes, use may also be made of the towing hitch.
