Basic instructions

Technical Information

This manual has been produced by a new technical information system. This new system is designed to deliver technical information electronically through CDROM and in paper manuals. A coding system called ICE has been developed to link the technical information to other Product Support functions e.g. Warranty.

Technical information is written to support the maintenance and service of the functions or systems on a customers machine. When a customer has a concern on his machine it is usually because a function or system on his machine is not working at all, is not working efficiently, or is not responding correctly to his commands. When you refer to the technical information in this manual to resolve that customers concern, you will find all the information classified using the new ICE coding, according to the functions or systems on that machine. Once you have located the technical information for that function or system then you will find all the mechanical, electrical or hydraulic devices, components, assemblies and sub-assemblies for that function or system. You will also find all the types of information that have been written for that function or system, the technical data (specifications), the functional data (how it works), the diagnostic data (fault codes and troubleshooting) and the service data (remove, install adjust, etc.).

By integrating this new ICE coding into technical information , you will be able to search and retrieve just the right piece of technical information you need to resolve that customers concern on his machine. This is made possible by attaching 3 categories to each piece of technical information during the authoring process.

The first category is the Location, the second category is the Information Type and the third category is the Product:

- LOCATION is the component or function on the machine, that the piece of technical information is going to describe e.g. Fuel tank.
- INFORMATION TYPE is the piece of technical information that has been written for a particular component or function on the machine e.g. Capacity would be a type of Technical Data that would describe the amount of fuel held by the Fuel tank.
- PRODUCT is the model that the piece of technical information is written for.

Every piece of technical information will have those 3 categories attached to it. You will be able to use any combination of those categories to find the right piece of technical information you need to resolve that customers concern on his machine.

That information could be:

- the description of how to remove the cylinder head
- a table of specifications for a hydraulic pump
- a fault code
- a troubleshooting table
- a special tool

How to Use this Manual

This manual is divided into Sections. Each Section is then divided into Chapters. Contents pages are included at the beginning of the manual, then inside every Section and inside every Chapter. An alphabetical Index is included at the end of a Chapter. Page number references are included for every piece of technical information listed in the Chapter Contents or Chapter Index.

Each Chapter is divided into four Information types:

- **(D)** Technical Data (specifications) for all the mechanical, electrical or hydraulic devices, components and, assemblies.
- (C) Functional Data (how it works) for all the mechanical, electrical or hydraulic devices, components and assemblies.
- **(G)** Diagnostic Data (fault codes, electrical and hydraulic troubleshooting) for all the mechanical, electrical or hydraulic devices, components and assemblies.

• **(F)** Service data (remove disassembly, assemble, install) for all the mechanical, electrical or hydraulic devices, components and assemblies.

Sections

Sections are grouped according to the main functions or a systems on the machine. Each Section is identified by a letter A, B, C etc. The amount of Sections included in the manual will depend on the type and function of the machine that the manual is written for. Each Section has a Contents page listed in alphabetic/numeric order. This table illustrates which Sections could be included in a manual for a particular product.

| | SE | СТ | ION | | | | | | | | | |
|--|--------------------------|------------------------|-----|---|---|------------|-----|------|-------|-------|--------|------------------|
| | A - Distribution Systems | | | | | | | | | | | |
| | B - Power Production | | | | | | | | | | | |
| | C - Power Train | | | | | | | | | | | |
| | D - Travelling | | | | | | | | | | | |
| | | E - Body and Structure | | | | | | | | | | |
| | | | | | | F - | Fra | ame | Pos | sitio | ning | |
| | | | | | | | G - | - To | ol Po | ositi | onin | g |
| | | | | | | | | Η- | Wc | orkir | ng Ar | m |
| | | | | | | | | | J - | Тос | ols ar | nd Couplers |

| | | | | | | | | | | | L - I | Field Processing |
| PRODUCT | | | | | | | | | | | | |
| Tractors | Х | Х | | Х | Х | Х | | Х | Х | | | |
| Vehicles with working arms: backhoes, excavators, skid steers, | | Х | | Х | Х | Х | Х | Х | Х | | | |
| Combines, forage harvesters, balers, | Х | Х | Х | Х | Х | Х | Х | Х | Х | Х | | |
| Seeding, planting, floating, spraying equipment, | Х | Х | Х | Х | Х | Х | Х | | Х | | Х | |
| Mounted equipment and tools, | | | | | Х | Х | Х | | Х | | | |

Chapters

Each Chapter is identified by a letter and number combination e.g. Engine B.10.A The first letter is identical to the Section letter i.e. Chapter B.10 is inside Section B, Power Production.

CONTENTS

The Chapter Contents lists all the **(D)** technical data (specifications), **(C)** functional data (how it works), **(F)** service data (remove, install adjust, etc..) and **(G)** diagnostic data (fault codes and troubleshooting) that have been written in that Chapter for that function or system on the machine.

Contents

| POWER PRODUCTION ENGINE _ 10.A | |
|---|---|
| TECHNICAL DATA | · |
| ENGINE - General specification (B.10.A - D.40.A.10) | 3 |
| FUNCTIONAL DATA | |
| ENGINE - Dynamic description (B.10.A - C.30.A.10) | 4 |
| SERVICE ENGINE - Remove (B.10.A - F.10.A.10) | 5 |
| DIAGNOSTIC | - |
| ENGINE - Troubleshooting (B.10.A - G.40.A.10) | 6 |

INDEX

The Chapter Index lists in alphabetical order all the types of information (called Information Units) that have been written in that Chapter for that function or system on the machine.

| POWER PRODUCTION - B | |
|---|---|
| ENGINE | |
| ENGINE - Dynamic description (B.10.A - C.30.A.10) | 4 |
| ENGINE - General specification (B.10.A - D.40.A.10) | 3 |
| ENGINE - Remove (B.10.A - F.10.A.10) | 5 |
| ENGINE - Troubleshooting (B.10.A - G.40.A.10) | 6 |
| | |

Information Units and Information Search

Each chapter is composed of information units. Each information unit has the ICE code shown in parentheses which indicates the function and the type of information written in that information unit. Each information unit has a page reference within that Chapter. The information units provide a quick and easy way to find just the right piece of technical information you are looking for.

| example information unit | Stack valve - Se | ectional View (| A.10.A.18 - C.10. | A.30) | |
|---------------------------|-------------------------|-------------------------------|-------------------|--------------------|----------------|
| Information Unit ICE code | A | 10.A | 18 | С | 10.A.30 |
| ICE code classification | Distribution systems | Primary hydraulic power | Stack valve | Functional data | Sectional view |
| | 1 | | 2 | | |
| | (A.10.A.1 | 18 - C.1 | 10.A.30) | | |

Navigate to the correct information unit you are searching for by identifying the function and information type from the ICE code.

- (1) Function and (2) Information type.
- (A) corresponds to the sections of the repair manual.
 (B) corresponds to the chapters of the repair manual.
 (C) corresponds to the type of information listed in the chapter contents, (D) Technical data, (C) Functional Data,

(G) Diagnostic or (F) Service.
(A) and (B) are also shown in the page numbering on the page footer.
THE REST OF THE CODING IS NOT LISTED IN ALPHA-NUMERIC ORDER IN THIS MANUAL.

• You will find a table of contents at the beginning and end of each section and chapter. You will find an alphabetical index at the end of each chapter.

в

• By referring to (A), (B) and (C) of the coding, you can follow the contents or index (page numbers) and quickly find the information you are looking for.

Page Header and Footer

The page header will contain the following references:

Section and Chapter description

The page footer will contain the following references:

- Publication number for that Manual, Section or Chapter.
- Version reference for that publication.
- Publication date
- Section, chapter and page reference e.g. A.10.A / 9

Torque

BOLT TORQUE INFORMATION

DECIMAL HARDWARE

- 1. Fasteners should be replaced with the same or higher grade. If higher grade fasteners are used, these should only be tightened to the strength of the original.
- 2. Make sure the fasteners threads are clean and that thread engagement is started. This will prevent them from failing when being tightened.
- 3. Tighten plastic insert or crimped steel-type lock nuts to approximately **50** % of the dry torque, applied to the nut, not to the bolt head. Tighten toothed or serrated-type lock nuts to the full torque value.
- 4. The L9 (Alloy) fasteners torque values are for a bolt, nut, and two washers. When using L9 (Alloy) fasteners, do not use the values in this table for tapped holes.

| GRADE | | | | | | | | | | | | | | |

| 1-1/2 UNC | 1329 | 980 | 990 | 730 | 2983 | 2200 | 2224 | 1640 | 4827 | 3560 | 3621 | 2670 | 4475 | 3300 | 4949 | 3650 | |

IMPORTANT: DO NOT use these values if a different torque value or tightening procedure is given for a specific application. Torque values listed are for general use only. Check tightness of fasteners periodically. Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical grade.

NOTES

- * Grade 2 applies for hex caps (not hex bolts) up to **152 mm** (**6** in) long. Grade 1 applies for hex cap screws over **152 mm** (**6** in) long, and for all other types of bolts and screws of any length.
- ** "Lubricated" means coated with a lubricant such as engine oil, or fasters with phosphate and oil coatings. "Dry" means plaind or zinc plated without any lubriation.

| Dry | | Dry | | | | |
| SIZE | Nm | lb/in | lb/ft | Nm | lb/in | lb/ft |
| M30 | 1375 to 1545 | | 1010 to 1140 | 1900 to 2140 | | 1400 to 1580 |
| M36 | 2400 to 2700 | | 1770 to 1990 | 3315 to 3730 | | 2445 to 2750 |

Use the above torques when specifications are not given.

These values apply to fasteners with both coarse and fine threads as received from supplier, plated or unplated, or when lubricated with engine oil. These values do not apply if graphite or Molydisulfide grease or oil is used. Use of a click type torque wrench, or better is required.

Grade 12.9 Bolts, Nuts, and Studs

Usually torque values specified to grade 10.9 fasteners can be used satisfactorily on grade 12.9 fasteners.

| -32 | 2 - 11-1/2 | 1.5 - 2.5 |

NOTE: Apply sealant/lubricant to male pipe threads. The first two threads should be left uncovered to avoid system contamination. Screw pipe fitting into female pipe port to the finger tight position. Wrench tighten fitting to the appropriate turns from finger tight (TFFT) shown in table above, making sure the tube end of an elbow or tee fitting is aligned to receive incoming tube or hose fitting.
